Wearable Ionizer

Air Purifier Instruction Manual

EcoShield

I AM PROTECTED

Designed and Tested:

U.S.A.

Specifications :

Model	EcoShield
Rated Voltage	DC3.7V
Power Consumption	<0.03W
Size	29.51×72.11×21.6
Net Weight	25g
Anion Output	10million/cm ³
Ozone Output	<0.001PPM
Power	Rechargeable Lithium Battery

Features :

- ◆ strong ionic wind with anion output at 20 million/cm³
- ◆ can hang this unit in front of neck
- ◆ can also clip this unit on the collar
- ◆ built-in lithium battery with USB connector

Structure :

Functions:

Refreshment: People prefers to live nearby beach, waterfalls, and forest, where are the natural places full of anions, and where people can refresh themselves.

Promoting metabolism. This product activates various enzymes of human body, as to enhance the metabolism, which is beneficial to absorb nutrients and to remove aging waste, and further to purify the blood.

Creating activated oxygen. Anions can effectively activate the oxygen molecules in the air, which can be easily and better absorbed by human beings, so that this product can prevent air-condition disease.

After people inhale more anions, lung can increase the oxygen absorption by 20%, as well to increase the carbon dioxide discharge by 15%.

Strengthen the ability of anti-disease. Anions can improve the body's response ability, and activate the function of reticular system, so as to increase the immunity of organism.

Improve sleep. Anions can improve the sleeping quality. This product can create the anions as well as tiny amount ozone, both of which can kill the virus and bacteria, and can remove the odors.

Anions can, by its negative charges, neutralize the positive charges of dust and smoke in the air, and make them drop by natural sedimentation.

Care for eyes. Anions can neutralize the high-voltage static electricity caused by TV and computer, effectively to reduce their harms to human eyes. Meantime, anions can also reduce the harms by dust towards the TV and computers

Skin care. The activated oxygen by anions can kill the mites, and to make the skin more elastic.

LT&B

Instruction Manual :

Please initially charge the battery with 2 hours.

1.Please fasten the unit on your collar with its stainless steel clip on the back side, so as to be convenient to use it.

2.Please hang this unit in front of neck through attached cord

Notes :

This product has been strictly tested.

According to the standard by our ministry of health, it is of no harm towards the human health for a stay of 10 hours in live oxygen at concentration less than 0.1 ppm.

Generally the air disinfection needs the live oxygen concentration at 0.25 to 2.5 ppm, and people can feel when the live oxygen concentration at 0.01 ppm.

The ozone output of this product is less than 0.04 ppm, which is quite safe for the human beings while it creates effects of disinfection. This product does not include any spare parts, please never open it by yourself.
